Some Affordable Web Hosting Choices

12blx is written in PHP with the source code protected using Source Guardian encoding. The PHP version must be set as one of the following four versions: 8.0 | 8.1 | 8.2 | 8.3 with the Source Guardian loader extension enabled/checked (an illustration is included with the Installation Guide). Numerous Web Hosting providers offer inexpensive Shared Hosting plans that readily accommodate these requirements.

The 12blx.com website is hosted on a Shared Hosting account at NameCheap.com, a favorite for it's pricing, features, and classic cPanel. The 12blx "one file upload" is a breeze with cPanel. Providers listed have a shared hosting plan that includes cPanel, and there are a few more not listed here.

NameCheap.com (Most Affordable, Instant SSL setup)
DreamHost.com
a2hosting.com
BlueHost.com
IONOS.com
